November 22, 1974

Mr. E. Stewart
W. G. Krummrich Plant
Sauget, Illinois 02201

Dear Ed:

We now have confirmation of Westinghouse-Bloomington's intention to fully participate in the program. Your contact man in Bloomington, Indiana is John Brittain, phone number (812) 332-4250. As I understand it, the results of your testing from Bloomington are to be sent to...

Mr. Roger Wills
Westinghouse Corporate Headquarters
8 Gategate Center
9th Floor
Pittsburgh, Pennsylvania 15222

We have also received word that McGraw Edison would like to participate. The contact man there is...

Mr. J. R. (Robert) Willy
McGraw Edison Co.
1520 Emerald Road
Greenwood, South Carolina 29646
(803) 223-2311

I have seen to it that all of these people have received copies of the questionnaire and other informative memoranda.

From a phone conversation with Don Wilson, I understand that you and he have already rescheduled the dates for sampling at Mallory's Waynesboro plant. Unless you desire me to undertake the task, I think it preferable that you reschedule the additional five companies (as explained previously, Sangamo has just received test data from you and therefore does not need resampling). The

DSW 374325

five companies are:

Capacitor Specialists, Inc.
Box 2052
Escondido, California

High Energy, Inc.
Malvern Industrial Park
Malvern, Pennsylvania 19355

McGraw Edison Co.
Greenwood, S.C.

Westinghouse
Bloomington, Indiana

York Electric Company
104 S. 4th Street
Brooklyn, New York

Incidentally, Ed, the contact man at G.E. Hudson Falls is Jim Herger.

This is obviously getting to be a fairly complex program, but one from which the data generated will be very beneficial. According to my records, the program now encompasses 14 companies with 16 plants, only 15 of which need sampling. I do hope you can have the samples drawn and back in St. Louis by the end of the year so that data may reach each companies' representative in late January.

Your co-operation on this is appreciated; I realize you are taking on a major program.

Cordially,

Clifford H. Tuttle
