AROCLOR SPECIFICATIONS

J. T. Bell - 1060

O. DeGarmo has suggested we put chemical composition limits on our internal specifications for solid Aroclors; a limit, say, on chlorinated biphenyl, a limit on chlorinated quaterphenyl, as an example.

This seems to be a reasonable suggestion in light of today's and tomorrow's environmental problems.

What chemical limits or specification would you suggest?

W. R. Richard
