Up to this time, the most recent Monsanto statement on the PCB situation was dated March 3, 1969. In the past seven months, much new information has been developed and it became apparent that we should update our position statement.

Attached is Draft IV, dated October 17, 1969. It is still a chronology of events statement and contains much of the same information contained in Draft III. I have marked those paragraphs which have been updated.

Please review and return with your comments as soon as possible. You will receive final copy when all returns are in.
