Dear Rex

Have you heard or have you been told anything about cumar? The State of Ohio Dept. of Agriculture has cut off a couple dairy farms, who have cumar on their old silo.

The 1254 Arcolar is a chlorenated Hydrocarbon and they have found some milk test with this Hydrocarbon and have traced it back to the silage which was effected by the cumar coating. They first thought they were getting a D.D.T. as it showed about the same test.

This 1254 Arcolar is made by Monsanto and I have talked to Doctor Kelley at their St.Louis office and he has told me not to use it.

I do not want to tell you not to use cumar, but it may be the best not to until this thing is settled as there may be a suit over it. We have not used any this year and was also told by Doctor Hill not to use it.

If you get a chance to talk to Mrs.Brassert about this, you may ask her if she has Mr. Brassert's old records and file on cumar. If Monsanto recomended to Mr. Brassert to use 1254 Arcolar in this mixture, then they will be part of the suit, if there is one.

Maybe Mr.Brassert's cumar records are in your file, as you received all the old Bloomfield records.

Yours truly,

Michigan Silo Co.Inc.,

Robert Egan, President
