WESTINGHOUSE ELECTRIC & MANUFACTURING CO.
AROCLOR 1254 SPECIFICATIONS

In accordance with your request when I was last in St. Louis, I have notified Mr. James R. Becker, Materials Engineer, Eng. Labs & Stds. Dept., of Westinghouse at East Pittsburgh, that our Sales Department is now studying the specifications. I suggested to him that further correspondence be directed to you.

My memo to you of December 2 brought the matter up to date as of that time.

Since that time there have been further comments by the Operating Department men and a flat turn down by Callahan on Westinghouse's idea of shipping the drums upside down.

For your convenience, I am attaching a tabulation of the points still at issue which may be helpful in case you wish to carry the matter further.

I am attaching, also, our complete file, minus the Trip Report #214, of which you have a copy.

Is there anything further you wish us to do?
