ITEM #6

Application Engineering covers composition head gasket for General Motors Corporation, again is this to be a Raw Material Division material? Information requested; Target Date is April 1st, 1970.

ITEM #11

Application Engineering oovers a Victocor 200 head gasket, request general information only. Target Date is October 1st, 1969.

ITEM #6

Materials Engineering covers the Carburetor Spacer Gasket Project. As you know, we are looking for work on our wet machine and the manufacture of this material could substantially increase our work load. Since a month ago this was a high priority project for a method of manufacture, I'm surprised at a April 1st, 1970 Target Date for the development of material. I'd highly recommend this project be moved into mid 1969.
