Dear Jim:

This letter confirms our conversation in St. Louis on May 18 that you will proceed with the preparation of a project proposal to "generate and do feasibility experiments on ideas for potential means of managing PCB's in the environment." We appreciate your willingness to let us informally review the written statements in your proposal prior to the formalities of approval within the University.

In our meeting you indicated that a project would probably require a two-year commitment. I have confirmed that a two-year project would be satisfactory to Monsanto. Thus, if we can reach agreement on the scope of a project and, of course, costing and the other necessary terms and details, Monsanto would be prepared to sponsor a post-doctoral investigator under your guidance for up to two years. We hope you will be able to get a project underway by the Fall term this year.

Please feel free to contact me for any further discussion or questions.

I received your letter of May 19 and forwarded a request for payment of travel by check direct to you. Please let me know if you do not receive the check soon and I will trace the problem.

Sincerely,

C-F-C

Clayton F. Callis
Director, Environmental
Operations & Tech. Plng.
