RETURN TO J. T. B.			

In Los Angeles, this week, I was given information about a problem which I think your company will wish to give immediate attention. I was informed by Mr. R. E. Rowley of the Los Angeles Bureau of Light and Power, 222 South Hill Street, Los Angeles, that the troops training in the California desert are burning 72 octane leaded gasoline in their cook stoves and having lots of trouble with deposits on the burners, so that they require cleaning after almost every meal. They thought they had gum trouble but does it not sound like lead deposit? I was surprised to learn that anybody used leaded gasoline in stoves, but if the army is allowed to do this, it looks as if something should be done to get around deposits.

Mr. Rowley is concerned with this because he is technical consultant to the War Department, and the troops keep asking him what to do when he visits them. I suggested his getting in touch with the Los Angeles Office of your company. You may also wish to communicate with Mr. Rowley.

Very truly yours,

UNIVERSAL OIL PRODUCTS COMPANY
