PUBLICITY IN CANADA

The announcement of the sale of its mine and two plants by Turner and Newall Limited to the Quebec government did not receive a great deal of comment by the news media. The attached article appearing in the Globe and Mail was the most significant item we have seen so far.

The same thing applies to the letter we presented to the Toronto plant union last Friday. We gave copies of the letter to the Toronto papers and wire service but only the Toronto Sun published anything. A copy of this clipping is also enclosed.

Subject:

I spoke with Hans Weill on August 10 and he has agreed to write Turner Brothers to request two additions to the monitoring data which they forwarded to AIA for release to OSHA.

Hans will request that they indicate that the monitoring data is based on area samples taken between 1961 and 1972. 1961 was used as the cut-off, since it was the first year in which TBA used the membrane filter method for sampling. In addition, he will request that the substance of the confidential note from H. Rhodes to Harry Hardie be included in footnotes on Tables 7 and 8.

Hans Weill also confirmed that Guy Gabrielson instructed him not to release the data to OSHA until such time as OSHA announces a hearing on the October 9 Proposal in the Federal Register. I spoke with Gene Connor today and requested that he raise this matter at next week's AIA Executive Committee meeting. Gene will urge the Executive Committee to authorize the release of the TBA monitoring data at the earliest possible time.
