R. D. Miller
R. M. Blowers

TO : Edward M. Emery - So. 2nd

One of our customers (Upjohn) had complained about our Triphenyl Phosphite. They indicate a Triphenyl Phosphate content of @ 18%. The material they received was from 1969 production. Our product (sales) file lists the average content of this property around 1%. Refer to K. Wells memo dated 1-20-70.

Per our telephone conversation Monday, I am sending you two samples of current production. Dick Miller in our purchasing is interested in the Triphenyl Phosphate content of this material following this customer inquiry.
