Lake Salmon Contaminated

"Quantities in excess of Federal limits of the industrial product called Polychlorinated biphenyls (PCB'S), also known by the trade name of Aroclors, have been found in salmon taken from Lake Ontario" stated E. Grant Pike, vice-president of Delta Labs. this week.

"One of the fish tested contained seven times the Frederal limit with 35 parts per million of PCB'S. The Food and Drug Administration has set a limit of five ppm on quantities on PCB'S which may be contained in edible fish. The Canandian limit is two ppm" he stated.

"The samples show the following Jack Coho 17.6, Jack Chinook 6.6, Jack Chincok 17.0, chinook 35.0, coho 14.0, coho 16.8 and chinook 15.6. These are the results of the salmon tested " Pike concluded.
