Monsanto Study J9884
Aroclor 5432

Effective immediately increase the feeding level of the T-I group from 1 ppm to 300 ppm. This group is to be held until the 300 ppm level has been fed for 90 days. Blood samples should be taken at the same time as the final bleeding of T-II and T-III.

At sacrifice, samples of liver, fat and mus are to be saved (frozen) for analyses. Each tissue sh ld be saved in a separate bag and marked accordingly.
