Subject: Caution Labeling Friction Paper - US/Germany/Japan

Attached are the three labels to be used in your discussion with Borg-Warner. The U.S. label is the one you are currently using and is approved by OSHA regulations 1910.1001. The Japanese was adopted from Article 57, Circular Notice 170. No translation to Japanese was available.

The German label was adopted from the West German - Chemicals Act of 1980 which applies to dangerous substances or preparations.

We believe these meet the requirements of individual countries based on information we have transmitted to you to date.

Size and color scheme still needs to be determined especially in the West German situation.

Let me know if you have any questions.
