## Abex – Special Service Blocks

### Extra Heavy Duty Blocks

- Designed for service where drum soak temperatures are frequently in the range of 500°.
- Bonded graphite particles are just one of the patented ingredients that add to the superior wear and friction characteristics.
- Density of this material surpasses all others in the industry. Check its heavier weight and high brass content.
- Recommended primarily for transit bus operations or where repeated braking is encountered.

(SAE FRICTION RATING FF)

### Logger Special

- A high performance block specifically designed for logging trucks operating in severe conditions.
- Use where vehicles are generally overloaded and where stopping power is of ultimate concern.
- Material will give superior braking at high temperatures and has excellent wet friction.
- Recommended where brake drums are water cooled or full cast heavy duty drums are used and soak temperatures do not normally exceed 650°.
- Proven superior to other organic and metallic friction materials by off-highway loggers where grades exceed 17%.
- Do not intermix this lining with other formulations.

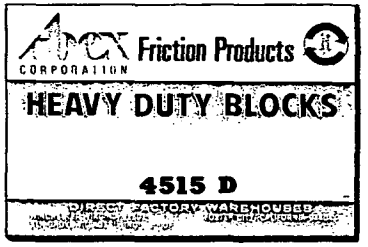

(SAE FRICTION RATING GH)

## Safer Stopping For All Applications

Abex®

**HEAVY DUTY FRICTION PRODUCTS**

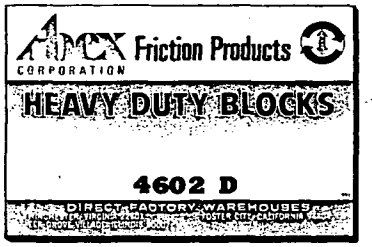

**Specified by America's Leading Fleets and Heavy Duty Vehicle Manufacturers.**

### Heavy Duty Cam Blocks

- A high performance lining specifically designed for service where repeated high speed braking is encountered on the highway and low speed braking in city areas.
- Good stable friction throughout a wide range of temperatures for the life of the lining.
- Will withstand brake drum soak temperatures in excess of 500° and will retain 75% of its stopping ability when subjected to water.
- Recommended for use on highway trucks and trailers, bus fleets (both urban and city) and medium duty logging.
- Recognized as a most compatible lining for both light-weight and full cast drums.

(SAE FRICTION RATING EF)

### Heavy Duty Wedge Blocks

- High performance lining specifically designed for the wedge brake.
- Designed for service where repeated high speed braking is encountered on the highway and low speed braking in city areas.
- Good stable friction throughout the wide range of temperatures for the life of the lining.
- Will withstand brake soak temperatures in excess of 500° and will retain 75% of its stopping ability when subjected to water.
- Recommended for use on highway trucks and trailers.
- Most compatible lining with both light-weight and full cast brake drums.

(SAE FRICTION RATING GG)

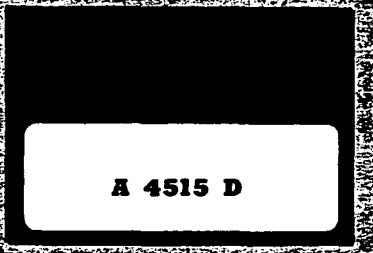

Abex Heavy Duty Blocks are designed to operate efficiently in 90% of all the operating conditions encountered. When operating in extremely overloaded conditions or consistently high temperatures, use Abex Extra Heavy Duty or Logger Special Blocks.

**IMPORTANT** For maximum braking efficiency reline all axles with the same formula lining.

## Abex – Friction Products

**Factory Warehouses:**
Winchester, Virginia 22601
Elk Grove Village, Illinois 60007
Foster City, California 94404
Memphis, Tennessee 38116

**Sales Office:**
27650 W. Big Beaver Road
Troy, Michigan 48084
(313) 643-4400
