an industrial relations bulletin stating that brake and clutch servicing were especially hazardous if they were not?

A I think to express that, well, not to be blowing things around as a general way of cleaning things up but vacuuming ought to be used. It's the same principle for all dust control in industrial hygiene.

And you've got, what is it, a two-page bulletin, three-page bulletin going out to a lot of nontechnical people, and so the easiest way to communicate that is don't blow anything around. Clean it up with the vacuum cleaner, especially things that might contain asbestos, including all things that could contain asbestos.

Q As a Ford toxicologist, do you believe it's a good idea to send something like this out to employees that are working with asbestos-containing friction products?

A Sure.

Q Having reviewed the documents that Ford has provided to you in conjunction with asbestos litigation, do you know whether Ford at any time provided any warning or document
