Art Andrews of Canadian General Tower would like to plan a visit to St. Louis for June 12th and 13th. He would arrive Wednesday evening June 11th.

The main topics of discussion would be:

1. F.R. Vinyl formulations.
   F.R. formulations reflecting low smoke development.
   Replacements for antimony oxide.

2. Polymeric plasticizers for non-acrylic pressure sensitive applications.

3. Fungicidal formulation (in particular to combat pullularia pullulans).

4. Review current data on long term light exposures in Florida.

5. Compatibility of low temperature vinyl systems.

Mike Campbell will make the necessary arrangements and forward a customer profile.

Jack, many thanks for your cooperation.
