INTER OFFICE MEMORANDUM

05 February 1980

MEMO TO: C. Steen

FROM: N. L. Renfro

SUBJECT: Asbestos Monitoring Results

On December 18, 1979, a small section of insulation that may have contained asbestos was stripped from the south side of the Crude I vacuum drum. Contract insulators were doing the job, therefore, monitoring equipment was placed at two stationary sources instead of on the personnel. The results of the monitoring revealed asbestos concentrations well below the OSHA standard.

SAMPLE	VOLUME	RESULTS	OSHA STANDARD
Blank	0	0	2 fibers 5 micrometer long/cc
2	321.1 liters	0.01 f/cc*	2 fibers 5 micrometer long/cc
3	310.3 liters	0.01 f/cc*	2 fibers 5 micrometer long/cc

* fibers/cubic centimeters
