Subject VCM PERSONNEL DOSIMETRY REVIEW

Attached is a summary of VCM dosimetry results since March, 1977.

I recommend two changes in sampling frequency:

1. Transportation Warehouse Workers should go from a quarterly basis to a yearly basis (one sample per crew per year).
2. Process Engineers should go from a monthly basis to a quarterly basis (one sample per quarter).

No other changes in the sampling plan appear to be justified at this point.
