PYDRAUL 625

We are going ahead with our plans to run acute exposures on Pydraul 625 at 2000° F. We haven't gotten the actual setup lined up as yet, and I am not so sure what it is going to cost us.

If at all favorable, we will run comparative tests with the competitive material which is some Cellulube. I am not sure which one it is, and I will depend on Mr. Davis to send me a quart of it.

Cellulube 550
4-58-32
