

1 Q Okay. How did you decide the two minutes?

2 A Again, it was the amount of time to cut
3 eight or ten grooves in the disc pad.

4 Q Okay. And, again, you cut eight or ten
5 grooves in the disc pad because you were trying to
6 duplicate the amount of fiber release that would occur
7 during an entire brake job on the vehicle; is that
8 correct?

9 A Working on one brake pad.

10 Q It would be one brake pad per wheel,
11 correct?

12 A I would think so.

13 Q If we had a four-wheel car, it would be four
14 pads?

15 A Yes.

16 Q Did you take area samples for that
17 activity?

18 A Yes, we did.

19 Q Okay. I believe that is reflected in your
20 raw data. If you could go ahead and take a look at
21 that and tell me what that is?
