that there was an increase.

You need to look at the subgroups in the study. You cannot just make a blanket statement.

Q Well, if you want, I will be happy to show this to you.

I am looking at a deposition of yours in November of '92 where you testified that there was no increase in cancer and nonmalignant diseases in refinery workers for studies you have done for Mobil.

A When you talk about overall, that is true, but when we look at a subgroup of people who were hired before 1950, remember, the exposure may be higher in the past, especially for benzene.

Q Okay. Let me ask you about another one.

Do you recall doing an epidemiological study for Shell regarding no increased risk of cancer in pesticide contaminated drinking water in Fresno County, California?

A Yes.

Q And you have also done research on arsenic contamination at a Super Fund cleanup site for the
