Attached for your information are summary copies of the PCB inventory for the 1985 "Annual Document" required by TSCA for your respective plant sites. Each site is required to prepare this document and produce it upon demand to EPA inspectors.

Some sites have noted "incomplete documents". This indicates that either I received no information, or that the information was inadequate to prepare the required "Annual Document".

Omissions of a site location (except Monsanto Oil which grouped a few locations) indicates no data was solicited or received. Thus, we need to check on any such omissions. Also, status of subsidiaries such as Fisher Controls, RDI, etc., for which you might have environmental responsibility may need clarification.
