Dr. Paul E. Brubaker
Research Department
Mobil Research and Development Corporation
Paulsboro, New Jersey 08066

Dear Paul:

At the NIOSH PCB draft document review you commented on the preliminary nature of the published report relating to PCB exposure of Mobil employees and indicated that further study has resulted in a change in the cohort being evaluated and there is a possibility that the results will be different. Since my notes are incomplete, I wonder if I understood your comments correctly.

As you know, the initial report resulted in considerable discussion among those interested in PCBs. It appears that a status report of the ongoing study would be very appropriate. Does your company plan to release a statement describing recent developments?

Sincerely,

W. B. Papageorge
