2. San Francisco Transformer Fire

[redacted]

3. New PCB Electric Rules

Advance copies of a new proposed PCB regulation covering electrical equipment, particularly transformers and capacitors containing PCB fluids, have been received from EPA sources. EPA is requesting information to draft new regulations requiring significantly stricter controls on use of such electrical equipment in all public buildings. Request for information for the proposed rule is expected to be published in the Federal Register next week and a proposed rule itself is expected to be published in late October.
