SUBJECT: SURVEY - OSHA LABELING REQUIREMENTS

On November 6, 1972 we sent out a request for information and interpretation of the OSHA regulations concerning labeling requirements for asbestos type brake lining and clutch facing shipments, where subsequent machining (cutting, grinding, drilling, chamfering, grooving) was likely to be done on these products.

Twenty-five questionnaires were sent out. Eleven replies were received. Replies were received from a reasonable cross-section of the membership. As the replies were confidential, the forms submitted by the members have been destroyed.

The survey will be a tool used at the next Asbestos Study Committee Meeting. It is suggested that members of the Committee attending the next meeting be versed in their own Company's position on labeling.
