Mr. James V. Chambers, Laboratory Supervisor
Ohio Department of Agriculture
Foods, Dairies, and Drugs
Reynoldsburg, Ohio 43068

Dear Jim:

The following are the results of the check samples of milk from the Humphrey Farm, Canton, Ohio:

41149 Ao (Plastic Bag)	41149 Bo (Jar)
0.24 ppm PCB	0.23 ppm PCB

These results are on the whole milk basis. The quantitative interpretation was made using the total area of the three major peaks of the sample residue versus the total area of the first nine major peaks in Arochlor 1254.

The residues were confirmed by two different GLC columns, their stability to alkaline hydrolysis and two dimensional TLC. There is no interference from DDT or its analogs.

If you desire any additional information, please call.

Sincerely yours,

Loren Y. Johnson
Director, Laboratory Branch
Cincinnati District
