Please attend a meeting in the Lab Conference Room at 2:00 p.m. on ~~Tuesday~~ Monday December 10 to review the PCB Environmental Control Program. Two problems have been highlighted by recent test results for which some changes in our program may be needed. These are:

1. Continued high losses of PCB reaching the waste treatment plant which are not accounted for by the in-plant surveillance.

2. The appearance of an unidentified material in the off-gas from the incinerator which interferes with the determination of PCB but which may represent material not completely destroyed by the incinerator.
