W. B. Papageorge
WPAPA

Attached is a copy of a letter sent to Bill Hunt from the FDA back in 1967. It relates to work done by the FDA to determine chick edema factor of several of the Aroclors.

The second page relates to fractions of Aroclor 1242 which may be of particular interest.

Enclosure

3/9/70

Seems to say Fraction #28 in Aroclor 1242 is Bad! Fraction #28 ≅ [illegible] 5 Cl; might also be concentration of other impurity in this fraction or an impurity.
