Subject: Proposed Emissions Standards for Hazardous Air Pollutants (NESHAPS); Asbestos

In the July 13, 1983 Federal Register proposal, an acceptable waste disposal site must meet one of the following requirements:

1. No visible emissions to the outside air.

2. At the end of the operating day or at least once every 24-hour period while the site is in continuous operation, the asbestos containing materials must be covered with 6 inches of compacted nonasbestos-containing material or a specified dust suppression agent.

3. Use an alternative control method for emissions that has received approval by the Administrator.

4. Warning signs and fencing must be installed.

5. A natural barrier adequately deters access by the general public approved by the Administrator.

RIPC-149-83 only gave the proposed changes to the disposal section. This letter gives all the options (old and proposed) for meeting requirements for disposal sites.

R. I. Pollard-Cavalli
