TO E. P. Wheeler - EWHEE

I telephoned Dr. K. Diane Courtney, National Institute of Health Sciences, Durham, N.C. to review the status of teratology studies of Aroclor 1254 and Aroclor 1260 on laboratory rats.

She informed me that no effects were observed but she did not give any information on dosage levels. She plans to continue her studies using mice as soon as she completes current work with mercury and NTA.
