Jeannette, PA 15644

Atten: Mrs. M. Weightman

Dear Mrs. Weightman:

Our product, Temp-Tite, is a two part compound containing approx 30% asbestos fibre and approx 70% of a partially polymerized phenolic resin.

The asbestos poses no problem to the user as each fibre is coated with resin and cannot be separated from the mass by handling or cutting.

The resin, however, is derived from the Sumac tree and can cause a rash on the unprotected skin of some people. Care should be used when handling this material. Either gloves should be worn or the user should wash with any strong soap after contact.

If you need any further information, feel free to contact me at the Industrial Gasket & Shim Co., Sealant Division.

Yours truly,

Kinsley Desch
Manager, Sealant Division
