Mr. Roger Van Zele
Manager, Project Controls
Clean Sites, Inc.
1199 North Fairfax Street
Suite 400
Alexandria, VA 22314

Dear Roger:

Enclosed is the information I have relating to SED Inc. PCB disposal practices. I'm sorry I don't have a list of warehouse locations, but if memory serves me correctly, they probably had or tried to establish ten to twelve locations around the country. (Ohio - Dayton or Akron areas, Wisconsin and others.)

I did have a meeting with Mr. Bill Bradbury of Rollins Environmental Services after our phone discussion and gave Bill your phone number. Rollins is one of the two (or three if G.E. has capacitor cracking ability/rotary kiln incinerators now) prime hazardous waste disposal companies capable of doing this job. As I indicated, you ultimately have to do business with one of the prime contractors because they are the only facilities with appropriate equipment and EPA permitted rotary kilns for commercial use.

We'll be glad to provide you with assistance. You can phone me (314/694-4764) or Dr. Bob Kaley (314/694-8558) if you have further questions.

Very truly yours,

John H. Craddock, Ph.D.
Environmental Policy Staff
Product and Environmental Safety Director
