REVISED MONOCHLOROBIPHENYL  
COST INCLUDING RESIDUE DISPOSAL

TO

J. R. Savage  
General Offices  
B2SL

Both the isomerization and hydrochlorination routes for disposal of monochlorobiphenyl residue have been considered. Based on this evaluation the following conclusions were generated:

1. New capital for 8M \$/yr plant

Isomerization \$200,000

Hydrochlorination \$1,100,000

2. Operating Cost

Isomerization \$27.828/cwt

Hydrochlorination \$32.886/cwt

The isomerization route can be installed within a reasonable time for it mostly consists of modifying existing equipment. The hydrochlorination route includes new equipment to be located west of the Aroclor department.

My thanks to Dave Johnson who supplied the cost information and usage estimate for the Pd/C catalyst. Also Lee Darnell's explanation of the 247 hydrogenation helped considerably. Both Gary Johnson and Pat McMahon assisted in putting together the cost sheets.

COST FOR MANUFACTURE OF  
MONOCHLOROBIPHENYL - 8M #/YR

ISOMERIZATION ROUTE

New Capital \$200,000

Operating Cost (see MCS 1547 Cost Std.)

|           |              |
|-----------|--------------|
| Raw Mat'l | \$21.399     |
| Directs   | 4.788        |
| Indirects | <u>1.640</u> |

Product Cost \$27.828/cwt

HYDROCHLORINATION ROUTE

Additional Capital \$900,000

Additional Operating Cost (see cost sheet)

|           |             |
|-----------|-------------|
| Raw Mat'l | \$ 3.911    |
| Directs   | .611        |
| Indirects | <u>.844</u> |

Gross Cost \$ 5.366/cwt

Above Product  
Cost \$27.828

\$33.194

-AL Cl<sub>3</sub> Cost .308

Product Cost \$32.886/cwt

MONS 021798

HYDROCHLORINATION

Cost of 5% Pd/C

New (have to buy metal)

|                            |                           |
