Less Carbon. As to carbon, Cylol like all oils deposits some carbon. But it deposits less carbon than any other oil. The most exhaustive tests have proven this statement.

Even more important, the carbon that is deposited by Cylol is soft and easily removable. It is not hard or sticky and cannot scratch a cylinder.

Prove it yourself! Cylol gives you the finest finish you have ever known—more perfect lubrication, "endurance beyond belief" and the elimination of carbon trouble.

Follow Roads to... So fill your crank case with Cylol. You can identify it by the new magnifying green-gold color. Solid...

YOU CANNOT MAKE A SILK PURSE OF A SOW'S EAR.

Neither can the best paint be made from WHITE LEAD SUBSTITUTES

Why is White Lead paint the standard paint of the United States Government? Why is it specified by architects and engineers, the world over, for important buildings and works?

Because Science has discovered no satisfactory substitute for White lead in paint! No other white pigment has its natural durability and water-resistance.

White Lead paint works out more easily and covers a larger area per gallon—an important saving, for the labor cost of application is often two or three times the cost of the paint.

Lighter coats can be applied with White Lead paint. When properly applied, it will

not chip or peel. This means a better surface for repainting, without costly burning off of old paint.

These exclusive advantages make White Lead paint the most inexpensive paint you can buy! Remember—The market price of pure White Lead will not permit its use, in practical quantities, in cheap paint. FULLER'S PURE PREPARED COGNATE MORE PER GALLON BUT LESS IN THE LONG RUN!

The best time for painting is now—when the surface is dry. Call a Master Painter today—and specify Fuller's Pure Prepared—the White Lead Paint!
