Subject: Box Labeling - Danger/Caution

A review of material sent to us from the Troy plant shows that not all of the material is labeled correctly. For instance on some AFL and AFD there were no labels at all. Current guidelines require a " Caution" label on non-asbestos product and a "Danger" label on asbestos product. A copy of the entire label wording is attached. In addition the scrap material you are sending to us for use in reclaim has no labeling on it.

Please review your procedures and audit functions to eliminate this problem.
