

Hi. I'm Jane Smith.

My daughter Samantha went to Russia in hopes of making a better world for her generation. That problem is far from being solved.

But there's another problem right here at home which has a simple solution.

I'm talking about childhood lead poisoning..

The solution lies in neighborhood lead screening programs.

You can start one where you live with the help of a new slide program that shows you how a lead screening program works .

It's free of charge to parent groups, neighborhood associations, *schools,* and health service professionals.
