Attached for your information are a sample of the hundreds of newsclips I've received from Michigan news media on the PCB silo suit now underway in Bad Axe. To a lesser extent, this story has been news in other parts of the country as well.

The trial marks the first time that Monsanto has been in court defending itself against claims of personal injury from PCBs. How we fare could be extremely important: another 850 to 1,000 PCB-contaminated silos are estimated to exist in other mid-western states.

The trial is expected to continue for at least the next few months.
