You have asked that four production lots of Aroclor made during the month of June be analyzed by both combined gas chromatography-mass and by the rapid empirical plant method used for production control. Bob McCutchan has supplied samples. These have been given to Martin Dietrich. He will run the combined GLC-Mass analyses and Ed Emery the GLC analyses. The work is scheduled to be complete and reported by Martin by July 28. This timing could not be bettered because of problems related to the move from 2nd Street to Creve Coeur and by work required to assure GM that Pydraul 312 contains no detectable PCBs.
