Munro M-100 Asbestos Fiber
Point Value

Current test results on Munro M-100 fiber indicates a further drop in point value from the SS level set last September. This was despite every effort of the Fiber Division to maintain the former level.

Therefore, effective immediately, we will formulate and use M-100 Munro at a Point Value of 46 including fiber now on hand. Obviously, we will pay for it at this level.

The practice of blending Munro and Advocate in the fiber blends should minimize the effect of the decrease in Munro Point Value on our operations.

Please revise your costs to reflect this change.

J. [illegible] McCarty
