SUBJECT: **Gasket Inventory by Part Number**

Attached is a summary listing by part number of the gaskets affected by the conversion program to non-asbestos materials. The new material being released by Engineering for each gasket is also shown, along with product family (hermetic or semi-hermetic), usage (head gasket, valve plate gasket, etc.), thickness range as shown on the drawings, and the finished goods inventory at Industry Products as of July 15, 1988. This inventory status does NOT include the orders in process as of that date. The stock status at Industry Products will be taken each month. The objective in making this information available is to keep each plant informed of the quantity of asbestos parts still at the vendor.

Keep in mind that as the raw material sheets are cut, gaskets within a .002-.003" range may be generated (due to the tolerance range across the sheet). As a result, you may see the stock for a given part number increase before being run down.

Each plant is requested to go through this list and track the part numbers used in their facility. We will request a monthly report from each plant regarding the total inventory value of asbestos gaskets on hand. This information is essential for us to monitor the corporate use-up of asbestos gaskets.

In addition, each plant is to use-up the supply of asbestos gaskets for a given part number before using the non-asbestos materials in production. Color differences and marking differences between asbestos and non-asbestos materials make this possible. If you need any assistance, please call.

It is recommended that each plant review their annual usage for each gasket part number and thickness, versus the inventory status at the plant and Industry Products. Where excessive inventory exists, you may wish to scrap part of this inventory in this fiscal year. Since we have a 3-year shelf life on packaged gaskets, this "3-year rule" may be useful in making this determination.

If there are any questions or comments, please let us know.
