

than 40 open automation components brought to market in the last year. PC-based control is at the heart of Cutler-Hammer's open automation solutions, which include leading-edge software and hardware for factory automation. These products provide shorter start-up times, improved troubleshooting, reduced downtime and flexible control, resulting in dramatic increases in productivity. Eaton's folding mirror actuator (bottom) permits folding and unfolding of vehicle mirrors electrically. Narrow streets, crowded highways and difficult parking situations, especially in the Far East and in Europe, have created substantial demand.
