MCS 1330: Preliminary Environmental Compatibility Assessment (EC-201)
LRS to GJL, 10/27/72 and 8/18/72

L. R. Stark
W4A

In reviewing my records, although I have noted that I spoke to you and Roger Hatton on the phone last August regarding the Preliminary Environmental Compatibility Assessment (EC-201) regarding this product, I have never committed the approval to writing. This oversight is being corrected.

In July, 1972, this product was granted preliminary approval for further development work. Subsequently, the formula was changed. The major change was the substitution of S-141 for diisodecyl adipate. S-141 has been tested and it is negative in our demyelination tests and reasonably biodegradable. Therefore, confirming our telephone conversations, this reformulated product also is given preliminary approval for further development work.
