
Monsanto's dielectric coolants and hydraulic fluids can put big "brains" in small bodies

Excessive body heat has strange effects on the human brain. Today, the electronic brain relies on bulky air convection, environmental cooling to maintain critical operating temperatures. Tomorrow's computers will have *built in* circulating liquid thermostats, allowing more electronic [illegible] matter in a smaller space. Monsanto offers a selection of coolants and hydraulic fluids (over 20 in choose from) chemically tailored for safe, reliable operation of compact electronic circuits. Monsanto's functional fluids can help you design tomorrow's high speed computers to think with a cool head, work with a [illegible] hand [illegible] in a minimum of space!

Check your needs with Monsanto's FLUIDESIGN service.

1. More job proven functional fluids than any other manufacturer in the world.
2. Design oriented fluids know how to help you develop safer, more compact and more reliable equipment.
3. Years ahead research on new types of fluids.
4. Sophisticated field application experience with fluids.

Be sure to get your free packet FluiDesign the Write in your letterhead to:

Monsanto Chemical Company
Organic Chemicals Division
FluiDesign Service Dept. 203 N.
St. Louis 66, Missouri

...ants and hydraulic fluids can put big "brains" in small bodies

...effects on the human body. Today, the electronic brain relies on bulky air ...ing to maintain critical operating temperatures. Tomorrow's computers will ...thermostats, allowing more electronic grey matter in a smaller space. ...coolants and hydraulic fluids (over 20 to choose from), chemically tailored ...compact electronic circuits. Monsanto's functional fluids can help you design ...s to think with a cool head, work with a cool hand ... in a minimum of space.
