1st Copy to E Wheeler
Rob Wellings

Herewith copy of a cutting from the Times of Saturday, October 25th, reporting that a high level of polychlorinated biphenyls has been found in dead sea birds. Reports of the meeting at which the announcement was made were also given on British Television programmes on Friday, October 24th.

Ruabon R. & D. are in touch with the Monks Wood experimental station where the analytical work was carried out and will be reporting further on this and any other data which we can assemble that polychlorinated biphenyls are connected with the recent widespread deaths of seabirds.
