

New diagnostic power for the true professional.

Introducing the Model 817-1009 Diagnostic Oscilloscope.

Our new Model 817-1009 is fast becoming the first choice of professional mechanics. It features a large 12-inch screen, so you can easily read the pattern from across the engine compartment. It produces a live display, not computer-reproduced, so it's faster than many large unit scope analyzers and costs much less. For more information call 1-800-253-9880. ■ Primary and secondary patterns ■ 10-foot leads with metal inductive pickups, heavy duty heat resistant leads, screw-on/plug-in lead connectors ■ 12-volt car battery powered ■ Bright high contrast pattern display ■ Portable (stand included) ■ EMI and RFI suppressed circuits (won't interfere with on-board computers) ■ Positive locking pattern display (no jump or jitter) ■ Automatic Raster Pattern Spread (fills screen regardless of number of cylinders) ■ Expanded Pattern Display Feature—left-side lock ■ GM TBI and Bosch fuel injection adapters ■ Protective cover
