Dear Mr. Rollins:

Re: "AD HOC PCB Committee"

The second sample of your plant water was analyzed at 7 ppb PCB's. This compares with 63.6 ppb in the original sample taken 12/11/74. The original sample appears to be much higher than one would expect. With other information related to your water supply, proximity to your disposal well and other factors, you may be able to rationalize which is the more correct value.

Very truly yours,

Edward E. Stewart
