FROM: J. C. Toman

SUBJECT: ASBESTOS FIBER
from Curty (Cefilac)

The attached report from Johns-Manville covering a comparison of the Cefilac fiber vs our J-M 5K02 confirms our preliminary report of May 17, 1971 on the same subject. The Cefilac fiber is slightly crudier and a little lower on surface area but it is also a little longer fiber.

We also sheeted out a sheet of 3/64" VICTOPAC 61 on our Production equipment in Plant 4 after mixing a Lab. Batch with this fiber on our small mixer. The test results on this sheet are attached, and the results are good - comparable to our VICTOPAC 61.

Please advise Mr. Vignals accordingly.
