Lost Workday Cases	1	0	0	0	0							
OSHA Recordable - Injuries	1	2	2	3	1							
- Illnesses	0	0	1	2	2							
Off-The-Job Injuries	2	6	2	5	7							

OUTSTANDING SAFETY PERFORMANCE

Again, the Technical Center has completed another full month without experiencing a Lost Workday Case or Recordable Injury at this site. The only Recordable Injury to a Technical Center employee this year involved a Central Engineering employee who was injured when he fell on a Sistersville Plant roadway.

Technical Center employees should all be proud of their recent safety performance. The last Lost Workday Case at this site occurred more than two years ago on March 5, 1984, and the last Recordable Injury occurred six (6) months ago on November 19, 1985. This is incredible safety performance -- keep up the good work!

ON-THE-JOB INJURY AND ILLNESS SUMMARY

Safety performance for the Technical Center and Construction was very good in May. On May 29th an eye injury to a Construction pipe welder trainee disrupted what could have been a perfect month. This injury accounted for the only Recordable Injury for the month for all functions. In summary, there were no Lost Workday Cases in May and we have one LWC year-to-date. We experienced one Recordable Injury in May and the entire Technical Center, including Construction, has a total of ten (10) year-to-date.

In the April report, the Construction Department was charged with a Recordable Injury involving an employee who was struck in the nose with a spud wrench. The formal investigation of the case revealed that this case was non-occupational; therefore, it will not be charged against Construction's Recordable Injury performance.

The following is a brief summary of the Technical Center May Recordable Injury:

- o May 29- Construction - A pipe welder trainee was using a pneumatic grinder to grind on a piece of six-inch (6") pipe. A piece of metal got in the employee's eye, became embedded, and had to be removed by an ophthalmologist. The employee was wearing safety glasses with sideshields and a full faceshield while grinding on the pipe.

ON-THE-JOB ILLNESS SUMMARY

There were two Recordable Illnesses reported in May. This brings our total Recordable Illnesses for the year to five (5). The following is a brief description of our May illnesses:

- o May 7 - Central R/D - A Central R/D operations technician was diagnosed with contact dermatitis of both hands, arms, and his stomach after using hydroxyl-ethyl-acrylate.
- o May 9 - Construction - A Construction metal shopperson was diagnosed with asbestos related pleural thickening. The condition is reportedly due to his asbestos exposure while working as a laborer and insulator for the Construction Department.
