cc J. E. Lipe - Pensacola
W. B. Papageorge - St. Louis

SUBJECT

REFERENCE

TO : E. S. Tucker - St. Louis

In the box to which this is attached are two fish, a shellcracker and a crappie, caught in the Escambia River delta area a few miles down stream from the Pensacola Plant.

These samples are part of our program of monitoring the presence of Aroclor 1254 in the Escambia River and Bay System and were sent to you as suggested by Bill Papageorge.

We are interested not only in the 1254 content of those organs where it tends to concentrate to the greatest extent but also in the presence, if any, in the edible portion.

Your assistance will be appreciated, and if further information concerning these samples is needed, please advise.

Joe
