Congressman Luken's subcommittee (the old Florio committee) will hold a hearing on Congressman Synar's PCB disposal bill under TSCA, Wednesday, November 18. The Chemical Manufacturer's Association, as well as other members of the PCB Regulations Consensus Group including environmentalists have been asked to testify.

As Chairman of the CMA PCB Panel, I have asked Paul Michael to represent CMA at the Luken hearing.

Tentative plans call for several industry members of the PCB Regulations Consensus Group, including CMA, to appear as a panel. Other industry trade groups on the panel will be NEMA and EEI-USWAG. (These are the groups that joined us on California Proposition 65.) The panel will present a joint prepared statement and then accept questions from the Congressional panel.

CMA staff groups will work to "prepare" Paul for the hearing, along with other industry panel participants.

Your comments and suggestions are welcome. Input is needed by Friday, November 13!

John Craddock
